Conflicts of interest

- I have no conventional conflicts of interest to disclose

A glimpse back at from whence
we've come

How soon is too soon? Not soon enough. Laboratory tests over the last few years have proven that babies who start drinking soda during that early formative period have a much higher chance of gaining acceptance and “fitting in” during those awkward pre-teen and teen years. So, do yourself a favor. Do your child a favor. Start them on a strict regimen of sodas and other sugary carbonated beverages right now, for a lifetime of guaranteed happiness.

- Promotes Active Lifestyle!
- Boosts Personality!
- Gives body essential sugars!

OWN A
Motorola
AND YOU KNOW YOU
OWN THE BEST

HOW TELEVISION BENEFITS YOUR CHILDREN

Motorola, leader in television, shows how TV can mean better behavior at home and better marks in school!

Home, sweet TV home! Peace! Quiet! No more "teeny day riots" . . . with television keeping small fry out of mischief . . . and out of mother's hair. And that's just one of many TV blessings. "Taking away television from children who 'set up' is a punishment that

really works," writes an authority on child psychology. "The very thought of missing some pet program turns little boys into lambs. And, incidentally, these favorite programs in the late afternoon are the world's finest magnet for getting early youngsters home on time."

Gets homework done—promptly! The simple rule "Homework first—television second" has solved the problem for thousands of families . . . has made children more interested in school work. "Television," says the New York Times, "can be enjoyed in healthy moderation in the same way as sports or motor-riding, but only the mother and father can make certain this will be the case."

Will television strengthen family ties? Educators, religious and social workers all agree it can be one of the strongest forces in America for bringing the family together to enjoy good, clean entertainment right in the home. Parents can select their children's "TV diet" from a wide variety of wholesome programs.

Motorola's leadership in elegant design as well as performance is recognized with the 1959 Fashion Academy Gold Medal Award. Typical example of Motorola ingenuity is this Table Model 1776. Clear, steady 16" picture, only 2 single controls, 8 1/2 lbs. net weight, price only \$219.95. View it at your dealer's along with other beautiful Motorola models from \$189.95 to \$469.95. There let a Motorola demonstration in your home show you how much TV enjoyment can benefit your own children.

Motorola

TELEVISION

Life in the old days (1984)

“Sperry Computer Systems has introduced the Sperry Portable Computer. . . . The 38-pound computer has 256K RAM and is expandable to 512K RAM. . . . It uses an Intel 8088 processor running at 4.77MHz. . . . The Model SPX has a single floppy disk drive and a 10MB hard disk and sells for \$4,985.”

(Abort, Retry, Fail? *PC Magazine*, 11/22/1994, p454)

The early Internet – not yet supported entirely from ad revenue and our data

“For a low one-time membership fee of \$8.95 a month, you can use our most popular services. . . .”

– *CompuServe Advertisement*

[Abort, Retry, Fail - *PC Magazine*, 2/7/1995]

Outline

- What makes us healthy or unhealthy?
- The movement to document and eliminate health disparities
- Adapting to the complexity of reality
- Epidemiology for enlightenment

What makes for health?

What makes for health?

- Physical security, safety
- Pure air, water, food, environment
- Good nutrition, physical activity, immunizations, public health, health care
- Education, economic resources, social support, opportunities

Official recognition of “Excess deaths” among minorities

- ❑ 1985 “Heckler Report”
- ❑ Useful landmark
- ❑ Minorities experience 60,000 excess deaths
- ❑ 8 main recommendations, including: outreach, cultural awareness, coordination, health care access, data, research

Report of the Secretary's Task Force

"Despite the unprecedented explosion in scientific knowledge and the phenomenal capacity of medicine to diagnose, treat, and cure disease, Blacks, Hispanics, Native Americans, and those of Asian/Pacific Islander heritage have not benefited fully or equitably from the fruits of science or from those systems responsible for translating and using health sciences technology." (Introduction and Overview)

1990s initiatives

1990 NIH Office of Minority Programs

1993 Health Revitalization Act, NIH ORMH

1997 Presidential apology for Tuskegee

APHA/HHS Campaign to Eliminate Racial and Ethnic Health Disparities

2000 PL 106-525: Minority Health & Health Disparities Research & Education Act

Healthy People 2010

Overarching goals:

Goal 1: Increase Quality and Years of Healthy Life

Goal 2: Eliminate Health Disparities

Trans-NIH strategy

A primary goal of PL.106-525 - ensure that NIH health disparities research be an integrated and inclusive field of study, rather than an aggregate of independent research activities in separate research domains.

27 NIH institutes and centers developed strategic plans during 2002-2006

IOM: Examining the NIH Health Disparities Research Plan (2006)

- ❑ Conceptual issues
- ❑ Need more attention to social determinants, ...
- ❑ Update strategic plans
- ❑ Budget not allocated
- ❑ More staffing
- ❑ Need more trans-NIH coordination

Healthy People 2020: overarching goals

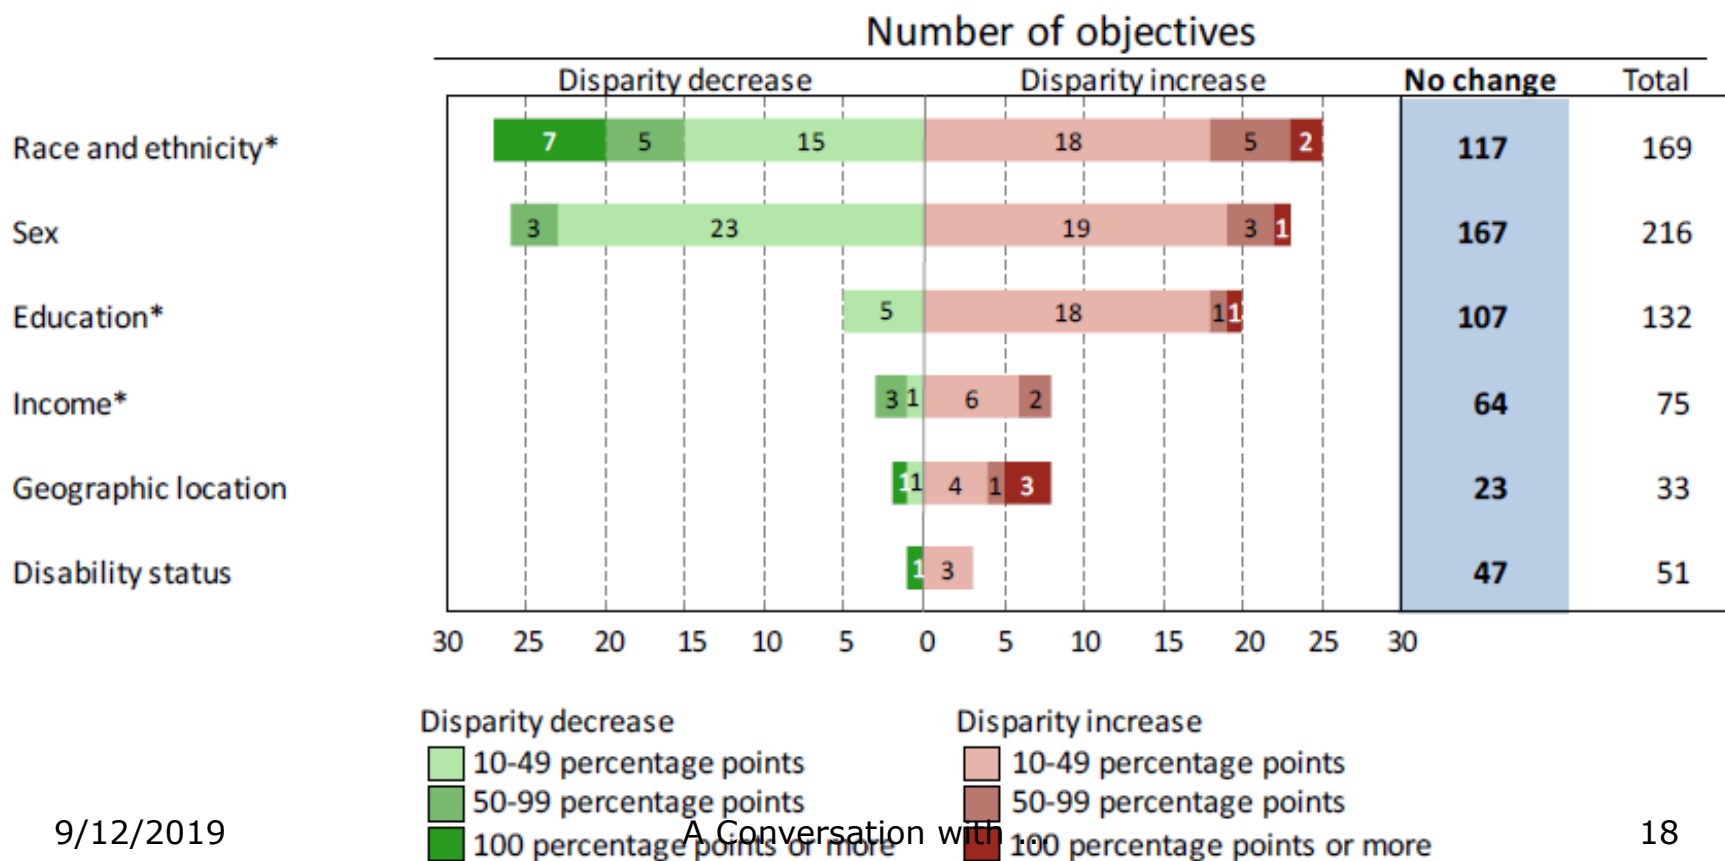

1. Attain high quality, longer lives free of preventable disease, disability, injury, and premature death.
2. **Achieve health equity and eliminate disparities.**
3. Create social and physical environments that promote good health for all.
4. Promote quality of life, healthy development, and healthy behaviors across all life stages.

Figure ES-8. Changes in Health Disparities from the Baseline to the Most Recent Time Points by Population Characteristic

(Healthy People 2010 Final Review)

“most of the population-based objectives with data to measure disparities had no change in health disparities.”

NIH Health Disparities Strategic Research Plan and Budget, Fiscal Years 2009-2013

- Health disparities persist and are seen across a broad spectrum of diseases and adverse outcomes.
- Health disparities are a concern for the nation.
- Health disparities are costly ~ 230 billion
- Health disparities are “shaped by the interaction of ... social, environmental, behavioral, and biological factors.”

How Far Have We Come in Reducing Health Disparities

Recurring themes from an April 8, 2010 Institute of Medicine workshop:

- ❑ Health disparities are not going away
- ❑ Economic hardship is an important contributor
- ❑ Institutional racism and racial discrimination persist
- ❑ Residential segregation, community environment
- ❑ Low levels of awareness among general public
- ❑ Policies of federal agencies besides those directly related to health
- ❑ Community input/initiation is key
- ❑ The Affordable Care Act should help

2012: How Far Have We Come in Reducing Health Disparities?

Paula Braveman:

- ❑ More and better research on social determinants, ...
- ❑ Intervention research
- ❑ Translational research:
How inform public?
How get them to care?
How create political will

What is missing?

“In order to eliminate disparities in health, we need leaders who care enough, know enough, will do enough and are persistent enough.”

(David Satcher, MD, PhD, “From Eliminating Health Disparities to Achieving Health Equity Bridging the Gap”, American College of Epidemiology 2015 annual meeting on “Systemic determinants of health”)

One area of progress: “Race” -> “Racism”

- Biological “races” (subspecies) do not exist in humans
- Socially constructed race: “Arbitrarily utilizes aspects of morphology, geography, culture, language, religion, etc., in the service of a social dominance hierarchy.” (Joseph Graves, “The Meaning of Race in Medicine”, 2006 annual Summer Public Research Videoconference on Minority Health
http://sph.unc.edu/webcast/sph-webcasts/?webcast_id=2006-06-26_vc1210sc2006/)

Good reads:

- J.L. Graves, The Emperor's New Clothes: Biological Theories of Race at the Millennium, Rutgers University Press, 2001, 2005; The Race Myth: Why We Pretend Race Exists in America, Dutton Press, 2005.

Good viewing:

But influences are pervasive

"... Americans are exposed, via television, to nonverbal race bias, and such exposure can influence perceivers' race associations and self-reported racial attitudes. Nonverbal behavior that communicates favoritism of one race over another can be so subtle that even across a large number of exposures, perceivers are unable to consciously identify the nonverbal pattern. Yet despite (or perhaps because of) this subtlety, exposure to nonverbal race bias may transmit race bias to perceivers." 1714

Max Weisbuch, Kristin Pauker, Nalini Ambady. The subtle transmission of race bias via televised nonverbal behavior. *Science* 18 Dec 2009;326:1711-1714.

TAKE ACTION

Why do we, as a nation,
make it so hard for our
children to thrive?
How can we do better?

Play Trailer

- of -

Consider these facts >

Can we centrally plan away health disparities?

- ❑ All aspects of life affect health, and we don't understand any aspect fully.
- ❑ Actions have multiple causes and effects (direct vs. indirect, now vs. later, ...).
- ❑ Different people have different views and are affected differently.
- ❑ We can't all agree, and there is no one in charge.

Behavior is fundamental

Health disparities arise from and are maintained by behavior:

- Personal behavior
- Expressive behavior
- Professional behavior
- Economic behavior
- Political behavior

What influences behavior?

Brain changes from early abuse

- ❑ Child abuse alters hypothalamic-pituitary-adrenal stress responses & suicide risk.
- ❑ Comparison of suicide victims with and without a history of child abuse found decreased levels of and differences in glucocorticoid receptor mRNA in brain.
- ❑ Epigenetic regulation of hippocampal glucocorticoid receptor expression.

(McGowan PO *et al.*, Epigenetic Regulation Brain Child Abuse, *Nature Neuroscience*, March 2009;12(3):241-3)

Your brain on hormones

- "... hormones alter emotional states (such as fear), bias attention (for example, toward sexual stimuli), or change the pleasantness or aversiveness of stimuli (such as infant odors) to alter behavioral probabilities in ways that depend on prior experience." p1146
- "The basic endocrine mechanisms and brain structures have been remarkably conserved in the course of evolution . . ."

(Elizabeth Adkins-Regan. Under the influence of hormones. *Science* 29 May 2009;324:1145. Review of Peter T. Ellison and Peter B. Gray, eds. *Endocrinology of social relationships*. Harvard, 2009)

Our brains are plastic

- ❑ Habitual actions require less mental effort than actions selected to achieve an outcome but must be inhibited if the situation changes.
- ❑ Rats subjected to chronic stress became less sensitive to changes in outcomes.
- ❑ Chronic stress caused structural changes in the brain that may bias toward habit and dysfunctional decision-making.

(Eduardo Dias-Ferreira *et al.*, Chronic stress causes frontostriatal reorganization and affects decision-making. *Science* 31 July 2009;325:p621-625)

Is the college experience bad for your health?

“The results of this study show that long working hours may be one of the risk factors that have a negative effect on cognitive performance in middle age.”

604

Long working hours and cognitive function: The Whitehall II Study. Marianna Virtanen et al. *Am J Epidemiol* 2009;169:596-605

“We have met the enemy and (s)he is us” – or is (s)he?

“For a long time, it was generally assumed that many of the mental processes that make goal pursuit possible require consciousness. But in the past decade or so, the scientific study of goal pursuit has discovered that these processes can also operate without conscious awareness, and hence, human behavior may originate in a kind of unconscious will.

Ruud Custers and Henk Aarts. The unconscious will: how the pursuit of goals operates outside of conscious awareness. *Science* 2010 (July 2);329(5987):47-51

Can consciousness be improved?

- ❑ Transcendental Meditation is attracting increasing interest. (www.davidlynchfoundation.org)
- ❑ “Quiet time” programs have shown great promise in urban schools with typical problems. (e.g., NBC newscast [LINK](#))
- ❑ Can epidemiologists evaluate a wholistic intervention with long-term impact?

Physician, Heal Thyself

Stritch School of Medicine students give new meaning to the adage

By Carla L. Brown, EdD, and Gregory Gruener, MD

Students at the Stritch School of Medicine learn about the science and methodology behind the transcendental meditation technique in the first TM elective course offered at a major medical school in the United States.

T ALL STARTED when a student at Loyola University Chicago Stritch School of Medicine described herself as too busy to even realize how anxious she was. Not only was anxiety affecting her mentally, but her hair was thinning and her heart racing. As her third year began she was terrified about becoming a doctor, guessing that she could not sustain her anxious lifestyle indefinitely. Her future career looked dismal. The passion she had once experienced for medicine and healing seemed to be trickling away.

But when she enrolled in a new elective at Stritch entitled Physician Wellness through Transcendental Meditation (TM), the first such course offered through a major medical school in the United States, she experienced a turnaround. The elective included training in the TM technique and a lecture series by leading researchers. As a result of her twice daily TM practice, she says that she is now more

Understanding TM

College students report the “highest stress and lowest mental health levels in 25 years” with serious consequences for physical health, including hypertension, diabetes, sleep disorders and mental health problems, according to psychologist William Stixrud. He notes that depression is “the second leading cause of debility worldwide for 15-44 year olds.” Qualities most compromised by these conditions are exactly the qualities most needed in medicine, including higher order judgment, flexibility, adaptability, and creativity.

Linda Brubaker, MD, dean of the Stritch School of Medicine, asserts, “Physicians who practice self-care, especially stress reduction, are likely to perform better as professionals and inspire their patients to adopt healthy behaviors.” With co-author Gregory Gruener, MD, Dr. Brubaker has led the Stritch School of Medicine in proactively addressing

Propositions on human behavior: looking under the hood

1. Living systems are made up of fundamental building blocks (e.g., quarks, electrons, protons, atoms, molecules) organized into organelles, cells, organs, etc.

Propositions

2. Living systems replicate, diversify, compete, cooperate, invade one another, incorporate one another, combine, and evolve into systems of increasing complexity.

Propositions

3. Complex living systems have nervous systems that can create the experiences of consciousness, memory, imagination, deductive logic, extrapolation, anticipation, prediction, and other mental functions.

Propositions

4. These mental functions are generated by the interactions of over 80 billion individual agents (neurons), in the context of other types of cells and the factors they secrete, as well as other internal and environmental chemico-physical influences.

Propositions

5. The resulting thoughts and actions, which are also influenced by perceptions and expectations of others' thoughts and actions, are generally aimed at advancing the organism's interests, as these are perceived by the organism and responded to by 80 billion+ agents.

Propositions

6. Collaborations, organizations, governments, strategic plans, policies, legislation, enforcement actions, and everything else reflect these myriad, competing influences. Ultimately, better outcomes require that thoughts and actions reflect more accurate, efficient, coherent and integrated brain functioning.

Propositions

7. Epidemiology should assign greater importance to understanding nutritional, microbiological, hormonal, environmental, behavioral, social, and institutional influences on the functioning of the nervous system and behavioral implications.

Collective action problems

“We call attention, however, to the behavioral features of collective action and their implications for solving public health policy problems.”

Gil Siegal, Naomi Siegal, Richard J. Bonnie. An account of collective actions in public health. *AJPH* 2009;99:1583-1587.

The dinner that cost Bill Gates, Warren Buffett and other celebrities billions

Warren Buffett and Bill Gates. Photo: Getty

What leads billionaires to donate to good causes?

“This week ... 40 billionaires – worth a combined \$230 billion (£145 billion) – signed a “giving pledge” to donate at least 50 per cent of their wealth to good causes. It is a remarkable act of noblesse oblige, even in a country whose tradition of philanthropy is the strongest in the industrialised world.”

www.telegraph.co.uk/news/worldnews/northamerica/usa/7929657/The-dinner-that-cost-Bill-Gates-Warren-Buffett-and-other-celebrities-billions.html

A Tale of Two Disparities

- ❑ Childhood immunization / measles elimination
- ❑ HIV/AIDS

Childhood immunization / measles elimination

Dual strategy: universal interventions +
targeted interventions

Gap in measles vaccine coverage narrowed
from 15% (1985) to 6% (1992) to 2%.

Risk ratio for disease among nonwhite
children (vs. white) declined from 4-7 to 4
to elimination of endemic disease

Elimination of Measles and of Disparities in Measles Childhood Vaccine
Coverage among Racial and Ethnic Minority Populations in the United States
